Pre-Visit Safety Screening

TeleDirectMD | Effective October 27, 2026

TeleDirectMD provides virtual care for non-emergency conditions only. Before your visit, please confirm that **none** of the following apply to you right now.

Do Not Book a Video Visit If Any of These Apply

- Chest pain, pressure, or difficulty breathing
- Signs of stroke, such as sudden facial drooping, arm weakness, or difficulty speaking
- Severe allergic reaction, such as throat swelling, difficulty swallowing, or widespread hives
- Suicidal thoughts or thoughts of harming yourself or others
- Serious injury requiring imaging or stitches, such as broken bones, deep wounds, or a head injury with loss of consciousness
- Severe abdominal pain with fever, persistent vomiting, or vomiting blood
- Currently pregnant or trying to get pregnant
- Seeking a prescription for controlled substances, such as opioids, benzodiazepines, or stimulants
- Under 18 years of age
- Not physically located, for the whole visit, in a state where TeleDirectMD is licensed
- Seeking FMLA paperwork, work or school accommodation letters, or disability documentation

If Any of These Apply

Call 911 or go to your nearest emergency department for any emergency symptom above. For a mental health crisis, you can also call or text 988 (Suicide and Crisis Lifeline).

For the other items, a video visit is not the right fit. Please contact your primary care provider or an in-person clinic.

Your Attestation

By checking the safety screening box on your intake form, you confirm that none of the items above apply to you and that you understand TeleDirectMD is not a substitute for emergency care. If your symptoms change or get worse before or during your visit, stop and seek emergency care.
